The modern alternative to hand stripping (and also the alternative to expensive in-line blanking tools!)

Automatic Waste Stripping for your Converting Department

TXR Blank Separator

- 5-6 times faster than hand stripping
- Make-ready 12 minutes
- No expensive tooling
- No operator injuries
- Highly flexible for short-medium print runs

- The TXR Series Blank Separator automatically blanks die-cut sheets. It employs a unique pin system configured to push down on a stack of sheets, separating the product from the waste material quickly and smoothly.

- Using inexpensive templates for the layout, set-up time is less than 15 minutes. The process is quiet and paper-dust free, speeds productivity and greatly reduces the need for the manual labour normally associated with hand stripping.

- Die-cutter speeds can also be increased by the removal of unnecessary stripping rules.

- The TXR processes a variety of material including paper, solid-board, microflutes and plastics.

- As an example, 12,000 sheets per hour of 400 micron material can be stripped by one or two operators.

- The TXR has been manufactured in Japan since 1994 using only high-quality reliable components.

- It is available for B1 and B2 sheet sizes, and is in use in converting departments throughout the world.

Above: TXR-1100 Blank Separator for B1 sheet size with paper feeder, pallet lifter and conveyor

The TXR strips these products:

- Cartons—solidboard and microflutes ✓
- Blister cards & inserts ✓
- Paper labels, plastic labels ✓
- Luxury & POS packaging ✓
- Polypropylene packaging ✓
- In-mould labels (IML) ✓
- Greetings cards & tags ✓
